

Pietre di Marmo Concrete (PDM)

PDM, also referred to as reconstituted stone, is produced using a mixture of binder and aggregates, thoroughly washed and screened, available in different colors (white granite, grey granite, white marble and black marble).

Key Features: Usually, seating and horizontal surfaces are brushed, while all vertical surfaces are sandblasted.

As a standard, the surfaces are treated with a special "Anti-deterioration" treatment, which increases the product's life and resistance characteristics to rain erosion, mold and similar events.

Upon request and with an additional charge, you can request an "Anti-graffiti" treatment, which allows the easy removal of the vandalism carried out with various types of sprays and permanent markers.

Generally, PDM products come equipped with bushings embedded in the stone, suitable for eyebolts to facilitate with the handling and installation.

It is very important to follow the manufacturer's **"Care and Maintenance"** guide to retain your product's warranty. In case of any doubt about the proper maintenance procedure, please contact id created for support.
