

Stainless Steel (Electropolished)

Metalco uses stainless steel AISI 304 or 304L with an electropolish treatment as a standard to improve the corrosion resistance of products manufactured in stainless steel. Especially important in areas with salty air, heavy air pollution, or areas with other atmospheric corrosion factors.

It is very important to follow the manufacturer's **"Care and Maintenance"** guide to retain your product's warranty. In case of any doubt about the proper maintenance procedure, please contact id created, Inc. for support.

ELECTROPOLISHED STAINLESS STEEL
